Abstract

Contents

1	Introduction	3
2	Theoretical Background	3
2.1	Voxelization	3
2.2	Octree	3
2.3	Divide and Conquer	3
2.4	Separating Axis Theorem (SAT)	3
3	Divide and Conquer Algorithm	3
3.1	High-Level Steps	3
3.2	Pseudocode	3
3.3	Complexity Analysis	3
4	Implementation	3
4.1	System Architecture	3
4.2	Program Flow	3
4.3	Key Implementation Details	3
5	Results and Analysis	3
5.1	Test Case 1	3
5.2	Test Case 2	3
5.3	Test Case 3	3
5.4	Test Case 4	3
5.5	Test Case 5	3
5.6	Performance Summary	3
6	Bonus Features	3
6.1	Concurrency	3
6.2	Interactive 3D Viewer	3
7	Conclusion	3
	Repository	4

1 Introduction

2 Theoretical Background

2.1 Voxelization

2.2 Octree

2.3 Divide and Conquer

2.4 Separating Axis Theorem (SAT)

3 Divide and Conquer Algorithm

3.1 High-Level Steps

3.2 Pseudocode

3.3 Complexity Analysis

4 Implementation

4.1 System Architecture

4.2 Program Flow

4.3 Key Implementation Details

5 Results and Analysis

5.1 Test Case 1

5.2 Test Case 2

5.3 Test Case 3

5.4 Test Case 4

5.5 Test Case 5

5.6 Performance Summary

6 Bonus Features

6.1 Concurrency

6.2 Interactive 3D Viewer

7 Conclusion
